

Your INL Update — Week of Jan. 11, 2010

This is Nicole Stricker with your INL Update.

You can hear the leader of the U.S. Department of Energy's Office of Nuclear Energy speak at Friday's Martin Luther King Jr. banquet in Idaho Falls. Dr. Warren "Pete" Miller is the banquet's keynote speaker. He is also visiting Idaho National Laboratory this week to discuss the lab's programs and progress.

Three Idaho high school students have won a Department of Defense cyber challenge. Teagan Durtschi ["DER-chee"], Ian Stewart and Jordon Todd spent their INL summer internships extracting evidence from a computer hard drive as part of a mock criminal investigation. The trio will receive a trip to the 2010 cyber crime conference in St. Louis.

You can view a gallery of nuclear power plant wall charts, thanks in part to INL. The lab's technical library is helping digitize a collection of design drawings that were originally published during the '70s and '80s. You can learn more from the Wired.com story linked on INL's Web site.

This was your INL Update. You'll find more information at INL.gov, including community announcements and the latest INL news.
